Will Fuel Recovery increase my linehaul rates?

A common concern among shippers is that adopting a market-based **Fuel Recovery** program will cause carriers to increase their linehaul rates. However, third-party research directly refutes this myth, demonstrating that shippers using Fuel Recovery achieve greater cost savings.

E2open:
The Numbers Tell the Story

E2open studied the impact of Fuel Recovery across their clients. They analyzed 40 shippers using Breakthrough to understand the impact.

The outcome?

12% Decrease
in fuel spend

3.1% Closer
to the industry linehaul rate benchmark

These findings demonstrate that shippers using Fuel Recovery not only reduce fuel spend but also achieve linehaul rates closer to the industry average.

A Carrier's Perspective:
Trust and Transparency

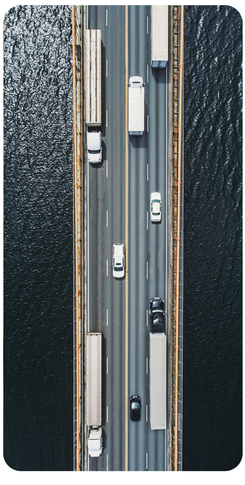

Adopting Fuel Recovery fosters stronger, more transparent partnerships. Carriers on the program appreciate the fair and accurate calculations that ensure they are made whole on fuel expenses.

"I trust the Fuel Recovery calculation more than a fuel surcharge schedule."

Jay Calavan, Trucks for You
President
